품 셋팅과 신규 인력교체로 인한 가동률 로스 ①②③ 각 6%씩 상향하여 81% 달성 목표.(설비 특성 및 고장 시 원인결과 2023년 경험으로 성숙하였고 신규 인력도 안정화 되어 목표 달성 가능)

- 현재 박스, 포장지, 원단 불량 이슈가 너무 많이 생겨서 가동률을 감소 시키는 비중이 너무 크게 작용하고 있음. (원단 텐션불량, 포장지 합지 및 인쇄 불량, 박스 향취 및 인쇄 불량) 구매팀, 품질팀에 공유하고 있지만 이슈 사진과 더 정확
- 배면 씰링문제로 인한 2023년 시간로스, 제품로스가 많음. 센터씰러 코리아팩 라인 설비 기술팀에 설비원리를 교육받았으 며, 2024년에는 그에 대한 경험을 토대로 하여 5% 가동률 상승 시켜 80% 가동률 목표 달성

- 야간에도 특별한 잔업근무가 없을 시 예방정비를 주기적으로 실시 한 기존 주간조에게 의지하는 방식이 아닌 가공 연마정비를 제외 한 교체, 점검 등 야간조 가능한 범위내 위주로 하여 예방정비 계획으로 2024년에는 목표 1.0% 가동률 목표를 달성
- 야간조 작업자들에게 책임감을 심어줌, 잘하는 직원도 있고, 잘 못하는 직원도 있기에 잘하는 직원들에게 격려도 해주고, 야간조 에 잘하는 직원이 있으면 가벼운 포상제 주어주신다면 팀장에게 보고해 포상해주면 다른 분들도 그 모습을 보고 더욱 열심히 하는 모습을 만들고 싶음, 목적이 포상보다는 기본 틀을 만들고 싶은 것
- 기술력이 미흡하지만 가동률에 큰 힘이 될 수 있는 것은 형식적 인 기술 향상보다는 제가 자신 있는 성실성에 맞춰야함. 남들보다 먼저 움직이고 서비스 시간이라 불리는 시간을 제가 투자한다면 설비적으로 생기는 시간로스를 보충 할 수 있다고 생각이 들어서 가동률 1.0% 목표치를 달성할 수 있기에 목표를

- 야간 설비 최고 선임으로서 야간에 취약한 근무시간 준수, 근무태도 솔선수범해서 다른 직원들도 따라 올 수 있게 시행하 며 야간에 취약한 정비부분은 주간조 팀원들과 공유해서 그날 그날 설비에 대한 컨디션 이슈사항을 숙지해서 5.0%라는 가동 률 목표를 달성, 멀티뿐만 아니라 모든 설비 야간 작업시 주간 이슈사항을 숙지함
- 가동률 향상뿐만 아니라 야간조 담당자로서 멀티에 대한 설비 문제 시 빠른 조치 능력도 좋지만 그러한 경우 다른 라인 플랜을 미리 준비하는 활동을 함. 멀티, 인터 자신있지만 휴대는 처음이라 그에 대한 설비를 배울 수 있도록 함.
- 야간의 안정화는 경험이 많은 엔지니어가 관리 해주는 것이라 생각함. 5.0%가동률 상승 목표 달성

- 2023년 정비 미숙과 각종 에러에 관하여 배우는 시간이라 생각함. 이번 경험을 바탕으로 엔지니어 회의에 의견도 제안하면서 성숙한 엔지니어가 되겠음. 정비주기 설정을 개인적으로도 한번 설정, 제안 하면서 실행함. 2024년 가동률 5.0% 올리는 것에 포커스를 맞추어서 행동하도록 함.

3-1 Process to determine material topics

HANUL conducted its first materiality assessment in 2023 to identify and incorporate key issues of sustainable management into ESG strategy formulation and decision-making processes. In the 2023 materiality assessment, the concept of materiality expanded in line with sustainable management information disclosure, and double materiality was applied.

From the perspective of impact materiality (social and environmental materiality), HANUL analyzed the impact of its business activities on society and the environment. From the perspective of financial materiality, it analyzed the external environment's impact on HANUL's financial situation to determine material topics.

Management of Energy

HANUL, as a manufacturing company, inevitably consumes energy in the production process. Recognizing the potential negative impact of energy consumption on the environment, HANUL strives to minimize this impact by selecting it as a material topic.

The main sources of energy consumption within the organization are Scope 1 LNG and Scope 2 electricity. Environmental data management began in 2022 due to issues such as the relocation of facilities.

Through the 2022 data and newly calculated 2023 energy data, HANUL plans to identify energy consumption patterns. Discussions on reducing energy consumption based on the calculated energy consumption will also be conducted in the ESG Management Committee. Examples of main reduction measures include the installation of mutual reactor devices for energy efficiency and power stabilization, as well as discussions on solar power generation projects.

GRI 303: Water and Effluents 2018

3-3_303

Management of Water and Effluents

Water, a key ingredient in the production of HANUL's products such as wet wipes, is particularly material. The water used in the production process of HANUL is 100% tap water, and wastewater is managed through outsourced treatment facilities.

303-1

Interactions with water as a shared resource

Review of water resource conservation measures

The Sunyou Industrial Complex, where HANUL Co., Ltd. is located, operates and manages approximately 1,041 facilities, including LCD general and Tanhyeon National Industrial Complex, Wolrong General Industrial Complex, Sunyou, Dangdong, and Beopwon General Industrial Complexes, as well as domestic sewage and factory wastewater treatment facilities, in collaboration with the Paju City Environment and the Environmental Management Corporation (EMC).

Every month, we visit the facilities with wastewater treatment devices to inspect the water quality and concentration of the generated wastewater. For other facilities, we track and investigate the amount of water used and the amount of wastewater generated on a monthly basis, and notify and inspect facilities with any abnormalities.

Currently, due to the nature of the product line produced by HANUL, water accounts for 90% of the finished products, and it is also used for sanitary water and cooling water for facilities.

As a result, there were numerous inquiries and inspections from EMC during the initial production process. To share this information and calculate the amount of water used, we installed measuring equipment on the incoming line from the tap water facility to the purified water facility, which is connected to the production line. This allowed us to calculate the amount of water used in the products, sanitary water, and cooling water for facilities, as well as the amount of wastewater discharged afterwards.

Furthermore, to encourage water conservation among employees and ensure efficient management of water, we have introduced automated sensors in the sanitary water usage areas of newly constructed buildings for management purposes.

303-2 Management of water discharge-related impacts

HANUL Co., Ltd. outsources all wastewater from a specialized treatment company and does not collect separate pollution data. Starting from 2024, we plan to measure and monitor the discharge concentration and original wastewater concentration once per quarter. We will make efforts to reduce the amount of wastewater and pay more attention to the surrounding water quality environment, including preventing water pollution.

Management of Emissions

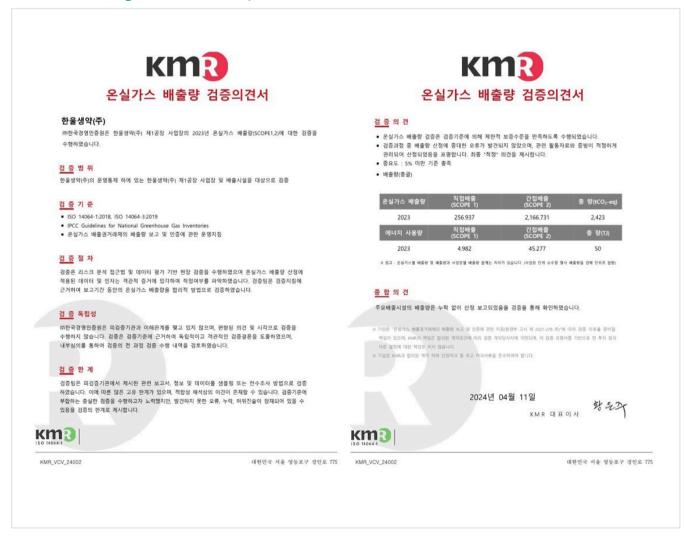

HANUL, as a manufacturing industry, inevitably consumes energy in the production process. Recognizing the potential negative impact of energy consumption on the environment, HANUL strives to minimize this impact by selecting it as a material topic.

The main sources of energy consumption within the organization are Scope 1 LNG and Scope 2 electricity. Environmental data management began in 2022 due to issues such as the relocation of facilities.

Through the 2022 data and newly calculated 2023 energy data, HANUL plans to identify energy consumption patterns. Discussions on reducing energy consumption based on the calculated energy consumption will also be conducted in the ESG Management Committee. Examples of main reduction measures include the installation of mutual reactor devices for energy efficiency and power stabilization, and discussions on solar power generation projects.

Greenhouse gas verification opinion

HANUL has been establishing greenhouse gas inventories and initiating greenhouse gas calculations since 2021 within the Sunyou Campus. However, the emissions before August 2021 were not included in the calculation due to the construction and preparation for occupancy of

305-5Reduction of GHG emissions

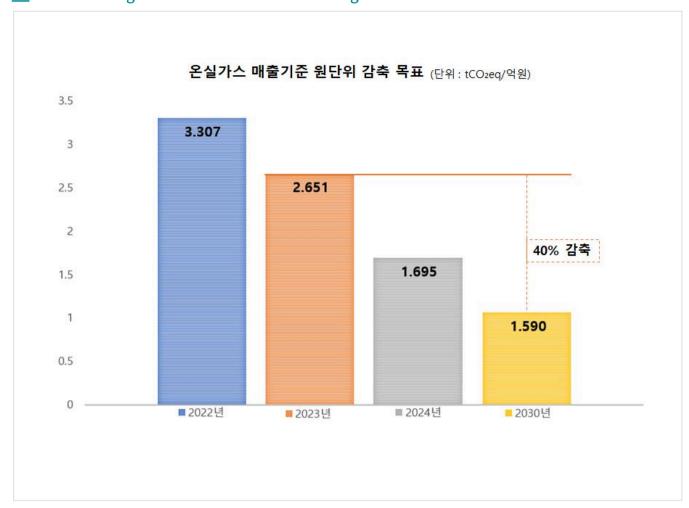

Hanul Pharmaceutical has set a target of reducing greenhouse gas emissions by 2% compared to 2023, and is currently promoting the installation of mutual reactor devices for energy efficiency and power stabilization through the introduction of renewable energy (solar power) to reduce non-renewable energy consumption. In addition, they are monitoring greenhouse gas and energy emissions used by the company by establishing a 'greenhouse gas inventory' and conducting employee training for energy reduction.

GRI 308: Supplier Environmental Assessment 2016

3-3_308

Management of Supplier Environmental Assessment The EU Corporate Sustainability Due Diligence Act (2024) is emphasizing sustainability across the industrial ecosystem, leading to increasing regulation and legalization of environmental and human rights audits for supply chain participants. Social assessments of suppliers help anticipate and manage risks in the supply chain, contributing to the establishment of a stable supply chain. Managing social risks from suppliers is crucial as they can directly impact product production and revenue. Hanul Pharmaceutical conducts pre-evaluations including ethical management, quality management, safety, and environmental factors when selecting new partners, imposing penalties or suspending registration for those who fail to meet the criteria, thereby enhancing sustainability and maintaining the stability of the supply chain.

308-1

New suppliers that were screened using environmental criteria

Evaluation of partners

Both new and existing partners are recommended to execute the 'Hanul Pharmaceutical ESG Regulation Compliance Agreement' and 'Goods Supply Contract' requesting compliance and agreement to ESG policies.

Furthermore, partner companies go through this process before proceeding with vendor registration or terminating trade relationships.

Pre-evaluation is conducted for selecting new partners, and existing partners are evaluated at least once a year.

The evaluation includes ESG factors such as ethical management, quality management, safety environment, etc.

Partners must meet the pre-established criteria of 76 out of 100 points during partner diagnosis.

Regular supply chain evaluation

We conduct regular evaluations of companies related to quality and ethics, and impose penalties such as redistributing trading volumes if they fail to meet evaluation criteria in terms of environmental safety management.

We will proceed with on-site inspections based on the response to the 'ESG self-assessment'.

Through this, we are taking measures to strengthen and enhance ESG capabilities of partner companies.

In 2023, a total of 32 supply chain companies were evaluated, and there were no companies that did not meet the criteria.

GRI 414: Supplier Social Assessment 2016

3-3_414

Management of Supplier Social Assessment

Due to the implementation of the EU Corporate Sustainability Due Diligence Directive (2024) and other regulations, sustainability is being emphasized throughout the industrial ecosystem, and regulations and legislation regarding environmental and human rights assessments of supply chain participants are increasingly spreading. Social evaluations of suppliers help establish a stable supply chain by identifying and managing potential risks that may arise within the supply chain. As social risks from suppliers can directly impact product production and profitability, it is crucial to manage them in advance.

When selecting new business partners, HANUL conducts pre-evaluations that include ethical management, quality management, safety, and environment, among others. If the designated criteria are not met, penalties may be imposed or registration as a business partner may be withheld. Through these measures, HANUL strives to enhance sustainability and maintain the stability of its supply chain.

414-1

New suppliers that were screened using social criteria

Evaluation of Business Partners

Both new and existing business partners are requested to comply with and agree to the ESG policies. We recommend the execution of the "HANUL ESG Regulation Compliance Agreement" and the "Commodity Supply Contract". Furthermore, the registration process or business relationship will proceed or terminate after going through this process.

Pre-evaluation is conducted for the selection of new business partners, and the evaluation is conducted at least once a year for existing business partners. The evaluation includes ESG factors such as ethical management, quality management, and safety environment. Business partners must meet the criteria of 76 out of 100 points in the preliminary assessment.

In 2022, a total of 23 companies were subject to registration evaluation, and 18 new business partners were selected. Five companies were put on hold due to inadequate quality levels and compliance with ESG regulations.

Note: The "HANUL ESG Regulation Compliance Agreement" and the "Commodity Supply Contract" are not publicly available due to internal regulations.

Negative social impacts in the supply chain and actions taken Supply Chain Regular Evaluation

We conduct regular evaluations of suppliers in terms of quality and ethics. If they fail to meet the evaluation criteria in terms of environmental safety management, penalties such as redistribution of trading volume are imposed.

We have received a response to the "ESG self-assessment" and plan to conduct on-site inspections.

Through this, we are taking measures to strengthen and enhance ESG capabilities for our partner companies.

In 2023, a total of 32 supply chain suppliers were evaluated, and there were no unsatisfactory suppliers.

Type of Engagement: The AA1000AS v3 verification type includes Type I verification for verifying conformity to the four principles (Inclusivity, materiality, responsiveness, and impact) suggested by AA1000AP (2018), and Type II verification for verifying even the reliability of important indicators in addition to the verification principles.

Level of Assurance: The assurance level of AA1000AS v3 is classified into high level verification and moderate level verification. Moderate level verification focuses on verifying the validity of information through limited-depth verification of evidence and low-level sampling to confirm evidence of the statement and draws conclusions from the assurance of the process in which the information is produced.

Methodology

To assess the reliability of disclosures about the sustainability performance in the report by applying the standards, we reviewed sustainability-related processes, systems, internal control procedures, and available data. The documentation reviewed during the assurance engagement includes:

- Non-financial information: Data provided by reporting authority and disclosed Annual Reports, information obtained from media and/or the internet, etc.
- Financial information: Financial statement reported based on Standard financial statement certification (2021, 2022, 2023).

The assessment was performed by document review and on-site verification. We interviewed employees who are responsible to prepare the report, where we evaluated the validity of the materiality assessment processes, a stakeholder-centric approach to select material issues, data collection and management procedures, report preparation procedures, and validation of claims stated in the report. It was confirmed that errors, inappropriate information, and ambiguous expressions identified during the assessment were properly corrected prior to the report being published.

- On-site verification location: 170, Donyu 2-ro, Munsan-eup, Paju-si, Gyeonggi-do, Republic of Korea (HANUL CO., LTD. HANUL Sunyou Campus)
- On-site verification date: April 18, 2024 (Thursday)

Our Conclusion

On the basis of our methodology and the activities described above, it is our opinion that:

- The information and data included in the report are accurate and reliable and the verifier cannot point out any substantial aspects of material mistake or misstatement.
- The report is prepared in accordance with the GRI Standards.
- The verification opinion on the four principles presented by the AA1000 AP (2018) is as follows.

Inclusivity

Reporting authority defined customers, employees, shareholders and investors, business partners, local communities, government and relevant agencies as key stakeholders. The organization has developed and operates various forms and levels of stakeholder communication channels, including its website, social media, shareholder meetings, and labor-management councils. The verifier found no evidence of omitted key stakeholders beyond those mentioned in the report.

Materiality

Reporting authority identified the financial and social/environmental impacts through double materiality assessment process based on international sustainability-related disclosure standards and ESG evaluation indicators, involving benchmarking with global advanced companies and media research analysis, and discloses 7 material issues through the report. The verifier confirmed that issues identified through the materiality assessment process were disclosed in the report without any omissions.

Responsiveness

Reporting authority prioritized material issues to provide a comprehensive, balanced report of relevant policies, performance, improvement plans, and future plans regarding them. We did not find anything to suggest that the data and information disclosed in the report do not give a fair representation of the reporting authority's actions.

Impact

Reporting authority identifies and monitors the direct and indirect impacts of significant issues identified through the materiality assessment, and the verifier confirmed that the organization reports on these impacts within the scope possible. No evidence was found indicating that the impact related to significant issues was inappropriately measured or reported.

Reliability of sustainability management performance data collection method

The verifier assessed the reliability of specified economic, environmental, and social performance data related to sustainability performance. The verifier interviewed employees who are responsible for preparing the Report, where we reviewed internal data on a sample basis and publicly available documentation and confirmed the reliability of the processes for collating qualitative and quantitative sustainability data described in the Report. Nothing came to our attention to suggest that intentional misstatements and/or material non-conformities in data are presented during the assessment.

Key areas for ongoing development

The verifier provides the following opinions to the extent that they do not affect the verification result.

Reporting authority actively discloses quantitative data in the economic, environmental, and social domains
through the report, demonstrating efforts in ESG performance management. In future reports, it is recommended
to present the company's policies, strategies, and goals in more detail from a mid-to long-term perspective on
selected material topics, and to communicate the achievements continuously. Such efforts are expected to
contribute to guiding reporting authority in setting the core direction of ESG initiatives.
